

Key Management: How can I continue to use my existing Key ID's?

The Key description field (which was originally intended as a physical description of the key/tag) can be used to hold "legacy" key IDs. And an option called **Show Key Descriptions Rather than Key IDs** in ADMIN Preferences allows the description field to be displayed in visit sheets, the sitter's key ring, and the mobile sitter application. One thing to remember is that the same description field applies to all copies of a client key. In the Key edit/checkin/checkout pages, the description field can be used to find keys.

Unique solution ID: #1021
