

Scheduling Services: How do I change a Service Name?

The name of a service type can not be changed. However, a service type can be deleted and re-created if there are no visits (past or current) that refer to that service type. Service types are editable in ADMIN > Service List.

If you want to change the name of a service type that has already seen use, you can mark that service type inactive (retiring that service type from the service type pulldown) and then you can create a new service type with the desired name.
