Client Access to LeashTime: How can LeashTime help me add a new client info request form to my website?

When a new visitor to your website decides she wants to learn more about your services or wants to request service from you, she can call you up or she could use a info request form on your site. LeashTime offers two ways to integrate this kind of form into your website, a form that not only generates a request on the Client Request queue on your LeashTime home page, but which can be used to automatically create a new LeashTime client from the information the client supplies. In both methods, the **NNN** value must be replaced with your LeashTime business ID. If you do not know your LeashTime business ID, please contact LeashTime Support.

Standard

- Hosted by LeashTime
- Ready to use, just link to it: https://leashtime.com/prospect-request-form-custom.php?templateid=fulladdress&bizid=**NNN**
- Has a standard set of fields
- Looks like your website
- Allows you to collect the client address as separate fields (recommended) or as a single field
- Not very customizable

Custom (Embeddable)

- Hosted by you
- Fields can be added to it
- Very modifiable
- HTML experience required

Please see the following page for instructions for incorporating an embeddable prospect form into your site. At the bottom is a working form. Please note that *this page should **not** be used as is*. It needs to be modified and then embedded in your site:

https://leashtime.com/prospect-embeddable.php?preview=1&bizid=NNN
